PROFILE

Frontend Developer with about two and a half years of experience in Web3 and privacy-focused products. I build interfaces that work with wallets, blockchain transactions and backend APIs: multi-wallet and cross-chain bridges, DeFi interfaces, staking, private transfers and administrative panels.

I work with TypeScript and React, building with Vite. For UI I use Radix UI and Tailwind CSS; for state management, Redux Toolkit, TanStack Query and effector.

WORK EXPERIENCE

POLYNOM LABS

Frontend Developer — 04/2024 — PRESENT

Developing frontend applications for Web3, DeFi, cross-chain infrastructure and privacy-focused products. Responsible for implementing complex UI workflows, integrating blockchain SDKs and backend APIs, and maintaining reliable transaction flows across multiple networks.

Cross-Chain Bridge & Staking Platform

React, TypeScript, Vite, Solana Wallet Adapter, RainbowKit, effector, Tailwind CSS

- Developed frontend interfaces for a cross-chain bridge connecting Bitcoin, Solana, and EVM networks, along with staking functionality.
- Implemented wallet connectivity, transaction status tracking, gas validation, and fee-aware transfer calculations.
- Added Solana transaction confirmation polling and request deduplication to reduce redundant calls to backend transaction services.
- Improved wallet and blockchain explorer interfaces, including wallet detection, extension installation flows, and transaction data presentation.

Multi-Wallet & Cross-Chain Infrastructure

React, TypeScript, wagmi, viem, Solana Wallet Adapter, LI.FI

- Developed a unified wallet controller supporting EVM, Solana, Bitcoin, and Liquid, centralizing network detection, balance retrieval, and wallet state management.
- Integrated LI.FI for cross-chain routing and implemented transaction flows with loading, success, and error states.
- Built blockchain explorer interfaces for displaying transaction data and network-specific information.

DeFi Trading Interfaces

React, TypeScript, Redux Toolkit, TanStack Query, Uniswap SDK, Highcharts, lightweight-charts

- Developed swap and liquidity pool interfaces with quote calculations, route selection, and transaction confirmation flows.
- Implemented limit order management, including order creation, cancellation, and status tracking.
- Built trading dashboards, interactive charts, leaderboards, and daily engagement mechanics.
- Optimized data fetching and UI state management to reduce redundant requests and improve interface responsiveness.

Privacy & Payments Platform

React, TypeScript, Vite, Radix UI, Redux Toolkit, TanStack Query, React Hook Form, Jest

- Developed payment application interfaces and administrative tools for audit and configuration workflows.
- Implemented private transfer flows with wallet integration, available-note management, KYT checks, and EVM address support.
- Contributed to automated testing of escrow scenarios and frontend integration with blockchain contracts and SDKs.

TECHNICAL SKILLS

LANGUAGES

TypeScript · JavaScript · HTML5 · CSS3 · SCSS

FRAMEWORKS & BUILD

React · Next.js · Vite · React Router

STATE & DATA

Redux Toolkit · TanStack Query · effector · REST API

UI & STYLING

Radix UI · shadcn/ui · Tailwind CSS · lucide-react · React Hook Form · i18next

WEB3 / BLOCKCHAIN

wagmi · viem · Solana Wallet Adapter · RainbowKit · LI.FI · Uniswap SDK · Freighter · Groth16

RELATED

NestJS · Fastify · Move (Sui) · Solidity tests · Gherkin

TOOLS

Jira · GitHub · GitLab CI · DigitalOcean · Jest · ESLint
